

## EasyTV

Pay-TV, message system and interactive TV are just some of the functions encompassed within the new solution designed by GLT for the hotel circuit.

**EasyTV** is easy to install, simple to use and enables the hotel-owner to offer advanced services without have to make big investments.

The existing television sets in the rooms can be used with the addition of a **Set Top Box**, or dedicated televisions can be used.

The existing TV aerial system is used.

**EasyTV** integrates perfectly with Perseo, through which it is possible to control all the functions and supply the Guest with information directly on the television in the room.

The unit, or **Set Top Box**, for installation near the television is already equipped with a RoomBus interface for connection to the Room Controller module which governs the room automation functions.

The definition of video channels, their number, their type and the broadcasting frequency are completely configurable by the user directly from PERSEO.

Numerous, heterogeneous audio/video sources are controlled by **EasyTV**.

It is possible to connect channels received through a terrestrial or satellite aerial, from VHS video recorders and also DVD players or personal computers dedicated to the recording of films and the presentation of information services.

## CONTROL SYSTEM

**1018/100****Control system complete with RACK**

PAYTV system central control unit complete with power feeders, RF modulators, RF mixers, RF input through traditional aerial, mixed RF output. Controls 4 PayTV channels. Option for two information channels.
